

The Spawn Point Sabotage

Grade 4 math · Rounding, Addition, Subtraction, Multiplication, Division · Reading level grades 5-6

Detective: _____ Date: _____

The peaceful voxel hills of Blockhaven have been ruined! A mysterious griefer bypassed spawn protection, flooded the town square with lava, and locked the Server Admin out of the console. We must scour the digital logs and piece together the blocks left behind to find the culprit before the server crashes.

1. Solve each math problem. The answer is a number, and the letter beside it is what that number stands for.
2. In the clue boxes, write that letter in every box showing the same number, then read the secret clue.
3. Use each clue to cross suspects off the list. The one suspect left at the end is the culprit!

My answer: the mysterious griefer is _____

Possible suspects

Cross off a row as each clue rules it out. The one left at the end is the culprit.

We checked the server scoreboard to see how many blocks the suspect mined. The tracker only shows rounded numbers, so we must estimate the values to unlock the first terminal.

Solve each problem, then write its letter in every clue box that shows the same number.

CLUE 3 Subtraction

The griever used TNT to blast a hole in the castle wall, but some blocks stayed standing. If we subtract the ruined blocks from the original count, we can find the blast strength.

Solve each problem, then write its letter in every clue box that shows the same number.

CLUE 5**Division facts (1-12) - the last clue**

The Admin wants to divide the recovered emerald bounty equally among the server mods who helped search. Let us divide the pile to find each moderator's share.

First solve each problem. Then find each answer in the numbered list below and cross that sentence out. One sentence will be left - that is exactly what the villain did!

Step 1 - solve these:

$12 \div 1 = \boxed{}$

$42 \div 7 = \boxed{}$

$70 \div 10 = \boxed{}$

$16 \div 2 = \boxed{}$

$44 \div 4 = \boxed{}$

$60 \div 6 = \boxed{}$

$10 \div 10 = \boxed{}$

$48 \div 12 = \boxed{}$

$14 \div 7 = \boxed{}$

$21 \div 7 = \boxed{}$

$35 \div 7 = \boxed{}$

Step 2 - cross out the sentence with each answer:

1. The villain soars past the custom sky limit, then casts a fishing rod into the river.
2. The villain hijacks the redstone repeater loop, then bakes a sweet pie in the brick oven.
3. The villain summons iron defenders in the courtyard, then feeds raw mutton to wild wolves.
4. The villain summons iron defenders in the courtyard, then bakes a sweet pie in the brick oven.
5. The villain soars past the custom sky limit, then feeds raw mutton to wild wolves.
6. The villain soars past the custom sky limit, then enchants a netherite bow with infinity.
7. The villain hijacks the redstone repeater loop, then feeds raw mutton to wild wolves.
8. The villain builds a portal near the bedrock, then casts a fishing rod into the river.
9. The villain hijacks the redstone repeater loop, then enchants a netherite bow with infinity.
